## **ADEPTIVE SOFTWARE RELEASES RESWARE 5.0**

*Industry's most effective real estate transaction management system continues innovation through enhanced workflow automation, trust and escrow accounting and customer file organization*

Boulder, Colo. — Nov. 10, 2009 — Adeptive Software today announced the release of ResWare version 5.0, the industry's most effective real estate title production system.

Like earlier versions, ResWare 5.0 can provide efficiency increases of up to 30 percent to title underwriters, title agents, vendor management companies, relocation and real estate services companies, and bundled service providers.

New features of ResWare Version 5.0 include:

- A visual Action Items™ process flow has been added, allowing an administrator to view an entire action list in a single user interface, including action affects and triggers. This allows the administrator to easily visualize and verify their workflow.
- The new 2010 HUD has been incorporated, allowing the user to switch back and forth between the two versions of the HUD and easily navigate both the HUD and the GFE.
- Default wiring instructions can be recorded and auto-populated on a per-partner basis.
- Reconciliation reports and usability have been improved, and accountants can create combined wires (a single wire that combines multiple transactions together).
- Partners can be automatically added to a file based on the existence of another partner. For example, a specific lender can always be added for a given client, or a client's parent company can always be added to the client's files.
- Administrators can create custom fields and conditional fields for use in document templates, making document creation more streamlined and efficient.

“As our customer base continues to grow, we listen to feedback and strive to make ResWare better, more efficient and easier to use for companies both large and small,” said Adeptive Software President Bryan Buus.

## About Adeptive Software

Based in Boulder, Colo., Adeptive Software develops products that deliver efficiency, flexibility and scalability for the real estate title industry. Adeptive Software's flagship product, ResWare,™ is a title production and process flow software package that can be scaled and customized for any size company. Used by the many of the industry's leading companies, ResWare ensures that transactions are accurate and efficient and that employees are executing the same way every time, reducing missing information, lost productivity and costly errors.
